I hereby certify, in respect of the animal described above, that after due enquiry and to the best of my knowledge and belief:

- The animal has been in Canada and/or the U.S.A. during the sixty (60) days preceding exportation.
- The animal was inspected on the premises of origin and found free from evidence of communicable disease and, insofar as can be determined, has not been exposed to communicable disease during the sixty (60) days preceding exportation.
- The animal has not been vaccinated with a live or attenuated or inactivated vaccine during the fourteen (14) days preceding exportation.
- Insofar as can be determined, no case of African horse sickness, dourine, glanders, surra, epizootic lymphangitis, ulcerative lymphangitis, equine piroplasmiasis, equine infectious anemia (EIA), contagious equine metritis (CEM), vesicular stomatitis, or Venezuelan equine encephalomyelitis has occurred on the premises of origin or on adjoining premises during the sixty (60) days preceding exportation.
- The animal was submitted to the immunodiffusion test (Coggin's test) or ELISA for equine infectious anaemia during the one hundred eighty (180) days preceding exportation in a laboratory approved by the Canadian Food Inspection Agency.  
The blood sample was taken on \_\_\_\_\_ and the result of the test was negative on \_\_\_\_\_
- The animal has not been in a country considered affected with contagious equine metritis during the twelve (12) months immediately prior to its exportation, except for horses which have met Canadian import requirements for C.E.M for permanent entry.

**NOTES:** 1- For entry in the U.S.A., this Health Certificate is valid for thirty (30) days following the date of inspection \* above.  
 2- Horses can return to Canada accompanied by this Health Certificate, provided that they return within 60 days of the date of entry to the US. A proof of the date of entry is needed, but if none is available, the date of endorsement of the certificate can be used as the last day in Canada. Return under these conditions is subject to changes in disease status within the United States and it is the responsibility of the owner/transporter who will present the horses for re-entry to Canada to check with their accredited veterinarian for any changes to these conditions.  
 3- Foals born after the mare has been tested for EIA are exempted from the EIA test requirement, provided that this test is still valid and they accompany their dam. However, the foal must be described on a separate HA 1964 form and the EIA test date must be the same as the dam.
